

Dear Parents,

Greetings From Ryan International Academy

This is a health and safety advisory, which is being issued to safeguard the health and safety of all our students and staff members in light of the outbreak of many contagious diseases like Covid-19, Monkeypox, Hand Mouth Foot Disease, Tomato flu, etc. which are now reported in various parts of our country.

As the threat of these communicable diseases looms large globally, the CDC and Ministry of Health and Family Welfare have issued guidelines on management of these diseases and create awareness, prevention and care. (Website links in the annexure)

We, as a responsible institution, are conscious of the need to take preventive and precautionary measures in the interest of our learners without creating undue panic. We also assure you that the highest standards of hygiene, awareness drive and precautionary measures being implemented at the school in interest of the safety and well-being of the entire school community.

In the light of the seriousness of the issue, we request your support in the following;

- a) Ensure that you absolutely **DO NOT** send your child to school even if you find mild symptoms such as cough, fatigue, body pain, rashes/blisters on skin, headaches, fever or any flu-like illness. If your child develops any of these symptoms, it is important that they **stay away** from school till the symptoms subside.
- b) Ensure your child comes to the school with a properly fit facemask and carries a small sanitiser bottle to use.
- c) Ensure good personal hygiene habits of your child. Efforts to drive healthy eating habits and food that boost immunity will go a long way in ensuring long-term health benefits.
- d) Always seek the advice offered by a registered Medical practitioner

We hope this information will help all of us in keeping ourselves and our community safe.

MONKEYPOX

Monkeypox is a zoonotic infection caused by the monkeypox virus. It is an orthopoxvirus virus that is very related to smallpox. This virus was contained to a few countries in Africa, but nowadays cases started appearing around the world. As of May 25th 2022, there are reported & confirmed cases of around **220** and suspected **90** cases. The incubation period of this disease is between **5 to 21** days. Symptoms can be mild to severe and the lesions can be very itchy or painful. The good news is the risk to the general public remains very low and there is a vaccine available for targeted vaccination of close contacts if required.

SYMPTOMS OF MONKEYPOX

Rash with blisters on all body parts

Fever

Swollen lymph nodes

Headaches

Muscle & Back pain

Low energy

Cont.Ref: WHO.Unbiasdiscipod

MONKEYPOX TRANSMISSION

Skin-to-Skin Contact

Face-to-Face Contact

Mouth-to-Skin Contact

During Sex

Touching infected bedding, towels, clothing etc

HOW TO PROTECT YOURSELF FROM MONKEY POX

Hand Hygiene

Avoid Close Contact

Practice Safe Sex

Wear Mask if you can't avoid close contact

Check for symptoms before close contact

HAND, FOOT AND MOUTH DISEASE

Hand, foot, and mouth disease (HFMD) is a very contagious viral infection. It's caused by viruses from the Enterovirus genus, most commonly the coxsackievirus. This is an infectious disease that occurs most commonly in infants and children younger than 5 years old, but can also occur in adolescents and occasionally in adults. In most cases, the disease is mild and self-limiting. Most children have mild symptoms for 7 to 10 days. The virus usually clears up on its own.

SYMPTOMS OF HFMD

Fever & flu

Rashes on hands & feet

Mouth sore

Decreased appetite

Drooling

Irritability

TRANSMISSION OF HFMD

Person-to-person contact

Respiratory droplets

Contaminated surfaces and objects

Cont Ref: CDC / WHO

PREVENTION OF HFMD

Hand washing /Hand sanitisation

Clean and disinfect

Avoid touching eyes, nose, and mouth

Avoid close contact with sick people

Stay home if you are sick with symptoms of HFMD

INFLUENZA (FLU)

Influenza (flu) is a viral infection that attacks the respiratory system. It is a highly contagious disease and is normally spread by the coughs and sneezes of an infected person. Flu is different from a cold. Flu usually comes on suddenly. For most people, influenza resolves on its own. But sometimes, the complications can be deadly. These are more common in children than in adults. The onset of symptoms are seen **1-4 days** after the infection.

WHO ARE AT HIGHER RISK

Children under
Age 5

Adults above
65 years

People With
Chronic Illness

Pregnant
Women

People with weak
Immune System

SYMPTOMS

Sore Throat

Muscle or body
aches

Headaches

Fever/
Feverish chills

Cough

Sweats

Running Nose /
Nasal Congestion

Fatigue/Tiredness

CARE & TREATMENT

Consult a Doctor

Cover coughs/
sneezes

Limit close contact
with others

Avoid touching your
eyes, nose, and mouth.

Hand Hygiene

Plenty of
Rest

Drink Plenty
of Liquids

Intake Vitamin C
Rich Food

Flu
Vaccination

HS Alert Version 03 Issue 0.213/2021

Thanking you,
Warm Regards.
